

# Worm Tea Brewing Instruction

Material needed,

2 paper clips and a 1 foot long string and a 5 gallon bucket with water.

How to Brew...

Clip one end of the string to the tea bag with one paper clip and clip the other end of the string to the top rim of a bucket.

Make sure the bag is capable to be completely submerged in the water. Fill the bucket with either lukewarm or room temperature water.

Rain water is, by far, the best. If rain water is unavailable, just let the water to stand uncovered overnight. If you have some water conditioner for the aquarium, apply the recommended dosage to sweet up the tap water. Brew the tea for at least 24 hours, stir the tea once in between, and stir it one more time prior to use.

Remove the Tea bag and keep it on the soil next to your plant. Do not discard in trash, the bag is biodegradable and it will keep your plant smiling. Trust us.
