

A worm's life....

It takes 21 days for eggs to hatch into baby worms. It will then take 3 more months, or 90 days for them to become mature and reproductive. A worm may then live to 7+ year old. So put into a line graph. If compare to a human life of 70 years old, this mean the from fertilization to birth in 5 months and become productive a little after 2 years old.

		70
21	0.79%	0.55
90	3.38%	2.36
2555	95.84%	67.09
